

# Power Supply & Power Adapter Solutions

*Products and solutions enabling high active-mode efficiency, low standby-mode consumption, and power factor correction, for efficient, compact power supplies from ON Semiconductor.*

## ON Semiconductor Provides Expertise, Solutions, and Products that Enable Designers to Quickly Improve System Efficiency

### Evolving Efficiency Standards

Evolving regulations and incentives, targeted towards improving energy efficiency, are intended to limit global climate change. Enhancing power supply efficiency alone can save over 2% of global energy consumption. Many organizations worldwide (such as China Energy Conservation Project, Japan Top Runner, USA Environmental Protection Agency, European Code of Conduct) now develop regulations and incentives for power supply efficiency, like DoE VI, CoC Tier 2, ENERGY STAR® and 80 PLUS®. ON Semiconductor actively participates in standards organizations and working groups, so that we can provide solutions to the market that meet all of the relevant specifications, worldwide.

### Power Supply Expertise

ON Semiconductor provides products and solutions that save power from line to load, enabling quick deployment of cost-effective power supplies that meet evolving global efficiency standards. Our expertise in high-efficiency power supplies helps solve your challenges in all focus areas for efficiency enhancement:

Low standby-mode power consumption

High active-mode power efficiency

Power factor correction

And since we provide a full range of power supply semiconductors – from highly integrated power factor controllers, ac-dc controllers, and dc-dc controllers, to discrete MOSFETs, rectifiers, diodes, and transistors – we can help you design complete power supply solutions, with all active components sourced from and supported by a single supplier.

### Reference Designs & Design Notes

ON Semiconductor provides reference designs and design notes for selected types of internal and external power supplies. These open designs provide roadmaps for the design of highly efficient power supplies, helping you get to market quickly by providing documentation that includes schematics, BOMs, Gerber files, design descriptions, and test results.

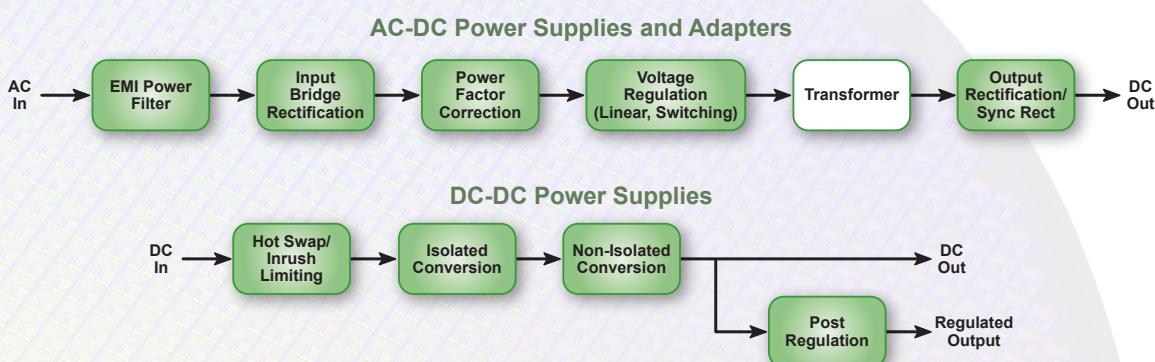

### Global Power Supply Presence

ON Semiconductor maintains a broad, global network of design and applications resources, including resources devoted to power supplies.

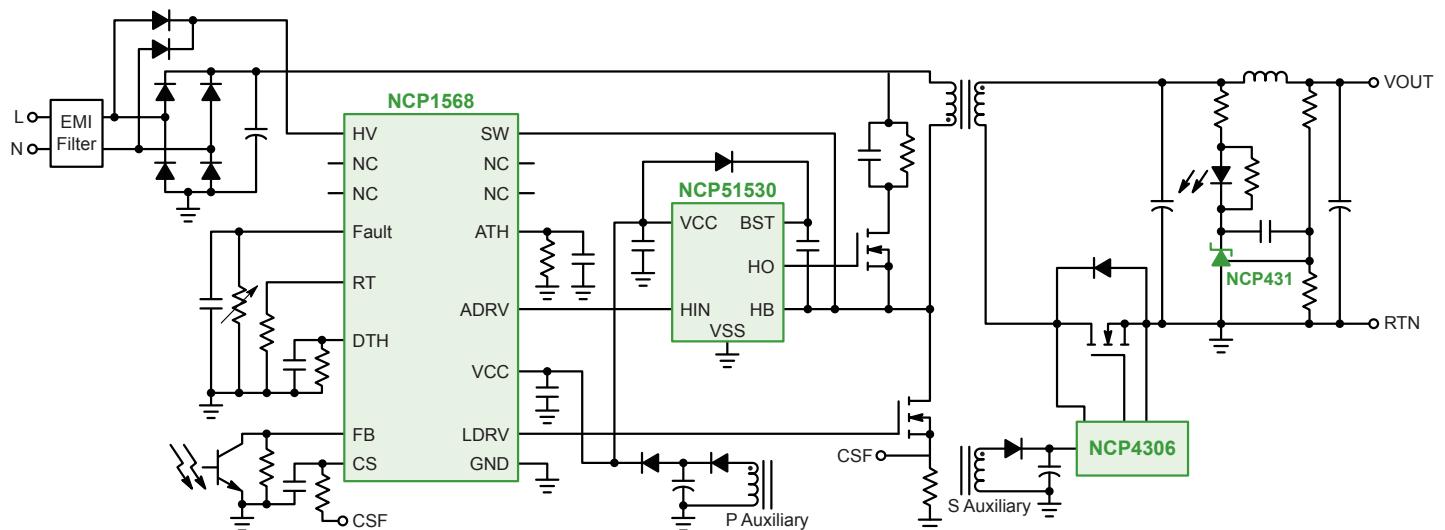

Our Product Design Centers define and develop advanced power management integrated circuits, utilizing the latest architectures and development tools. Products are targeted for a range of process technologies, including analog CMOS, Bi-CMOS, and Very High Voltage (VHV).

Our Solutions Engineering Centers focus on developing value-added total solutions for specific end market applications. These centers are staffed with applications engineers with design experience, and are equipped with all of the resources necessary for local manufacturers to benefit from the vast power management experience of ON Semiconductor.

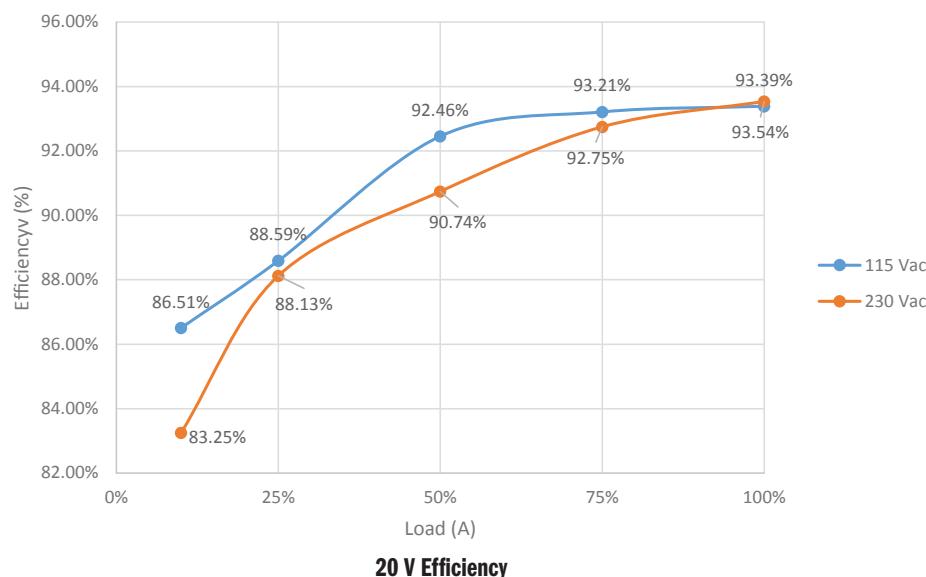

A global network of Field Applications Engineers provides truly customer-specific support. These local resources can help you optimize your power supply designs, by contributing their experience and training, with both applications and specific components, to your design location.

## High Efficiency Conversion with Active Clamp Flyback

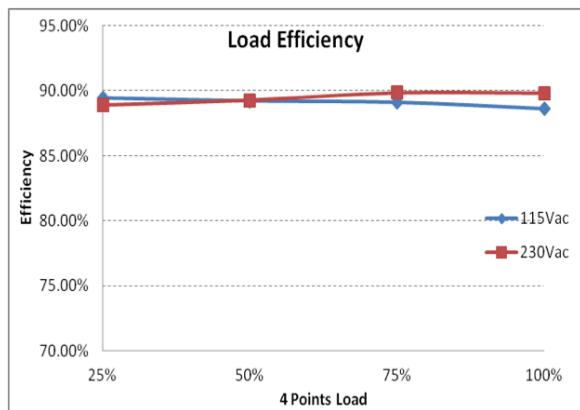

Typical Application for NCP1568 Active Clamp Flyback

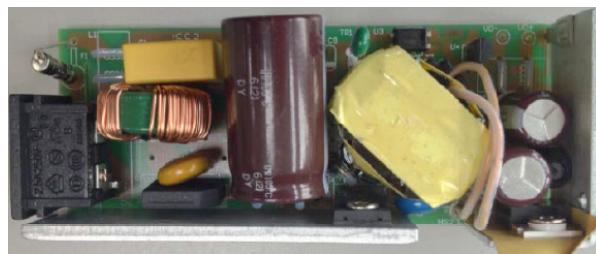

## 65 W Low Standby-Power Adapter

No Load Input Power Consumption

Input Voltage	Input Power (mW)
85 V; 60 Hz	31
115 V; 60 Hz	31
230 V; 60 Hz	39
265 V; 60 Hz	47

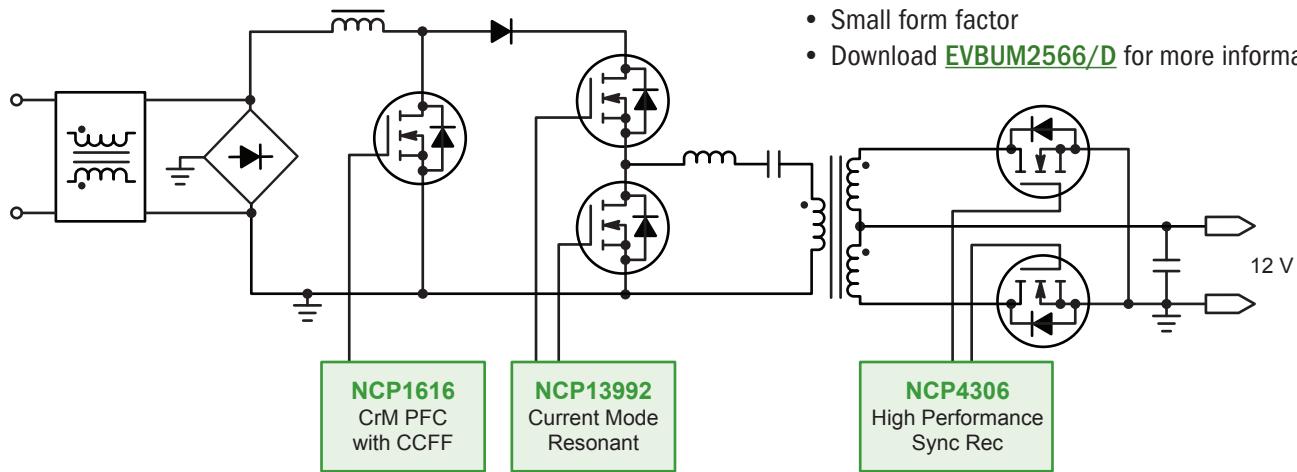

- NCP12400 enables a fixed-frequency adapter with low system cost
- Compatible with CoC Tier 2 Standard
- No-Load power consumption <75 mW
- Average efficiency >88%
- Frequency modulation for softened EMI signature
- Frequency Foldback, then Skip Mode for maximum performance in light load and standby condition
- Integrated HV start-up and X2 discharge

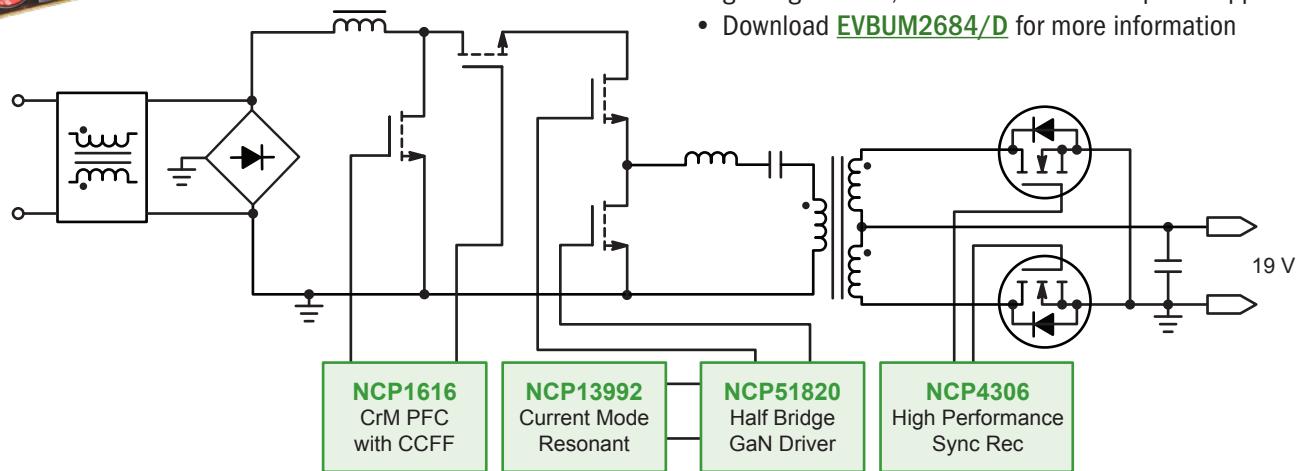

## CrM PFC + LLC Solution for 240 W All-In-One PC Power

- High efficiency meeting 80 PLUS®
- No auxiliary SMPS
- Near unity power factor
- Excellent load and line transient response
- Small form factor
- Download [EVBUM2566/D](#) for more information

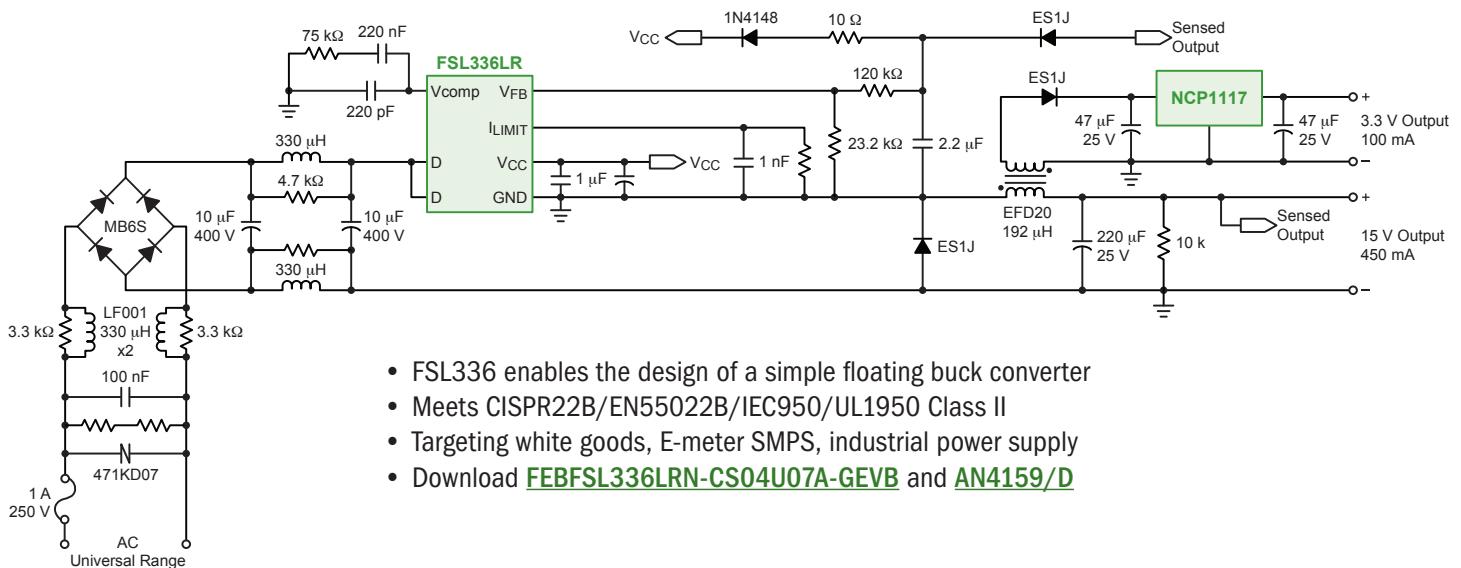

## GaN Ultra High Density 300 W Adapter

- Power density up to 32 W/in<sup>3</sup>
- Fixed output voltage 19 V peak power up to 340 W
- Synchronous boost PFC using CrM PFC controller NCP1616
- 500 kHz LLC stage implementation using 650 V GaN half bridge driver NCP51820, and current mode LLC controller NCP13992
- Scalable design suitable for high power gaming adapter, gaming console, AIO PC and industrial power application
- Download [EVBUM2684/D](#) for more information

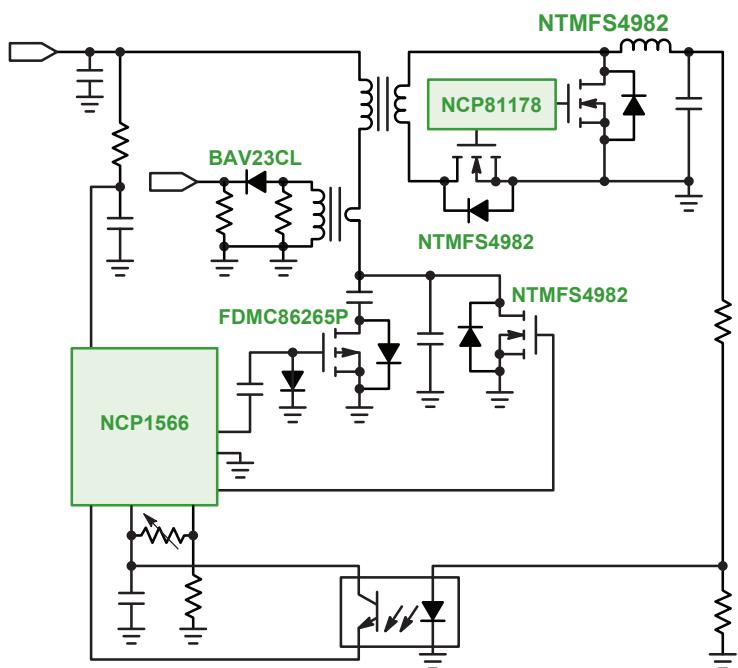

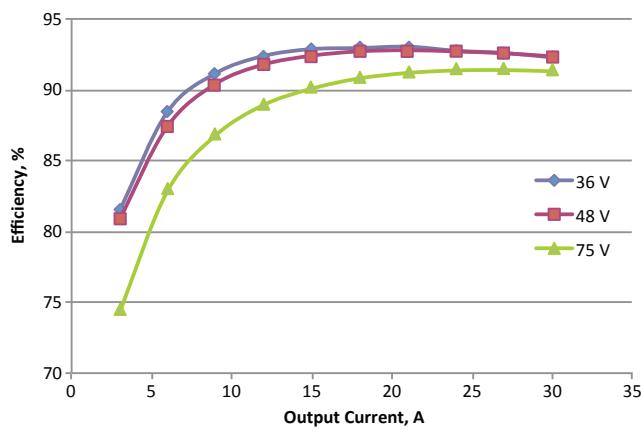

## Non-Isolated Multi Output 7.08 W Buck Converter with FSL336 – the Lowest RDS(ON) Switcher

## Active Clamp Forward DC-DC Converter

### Dual Mode Active Clamp PWM Controller

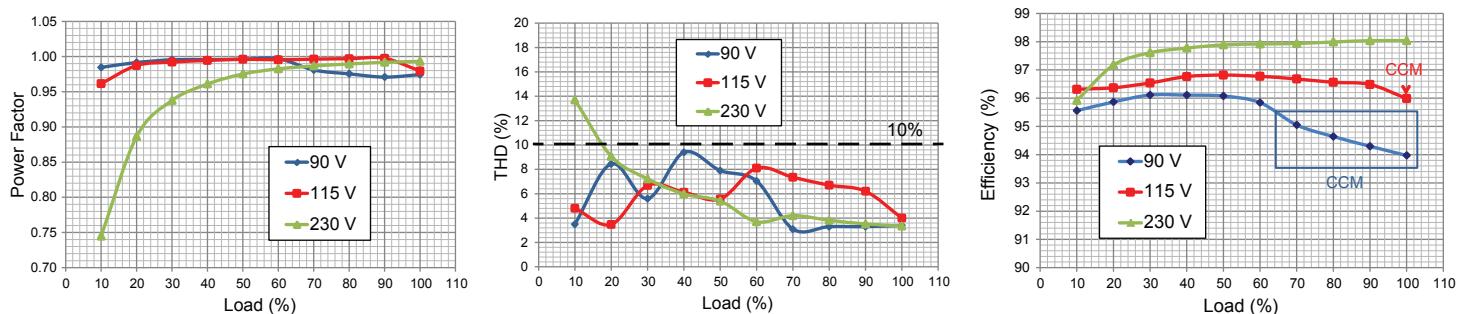

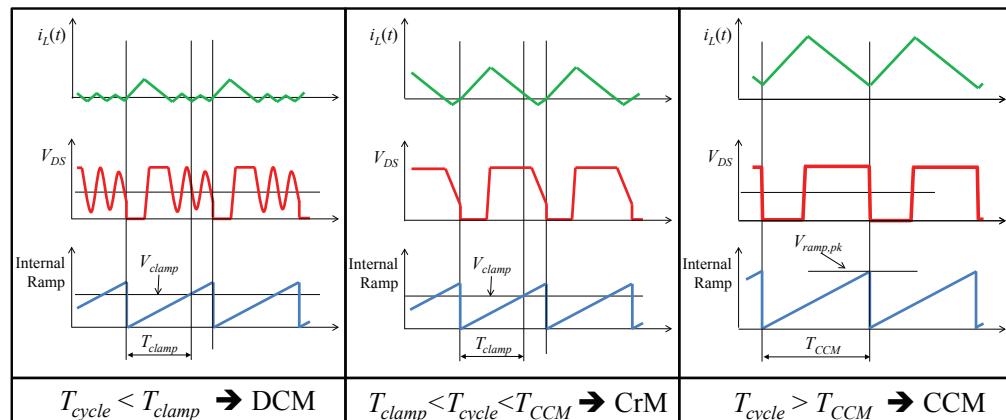

- Supports both Voltage Mode and Current Mode
- >92% Efficiency @ +48 V input
- Enables >100 W, 1/16 brick solutions

## Power Factor Correction

### NCP1618 Features

- Controller naturally selects the optimal operation mode from CCM, CrM, or DCM with frequency foldback for an optimal efficiency over the line/load range
- The circuit enters soft skip mode at very light load condition to meet most stringent standby power specifications
- Near unity power factor in all modes CCM/CrM/DCM
- Integrated HV circuit for start up and also fast line / load transient compensation
- PFC OK signal for sequencing control of downstream isolated DC-DC stage

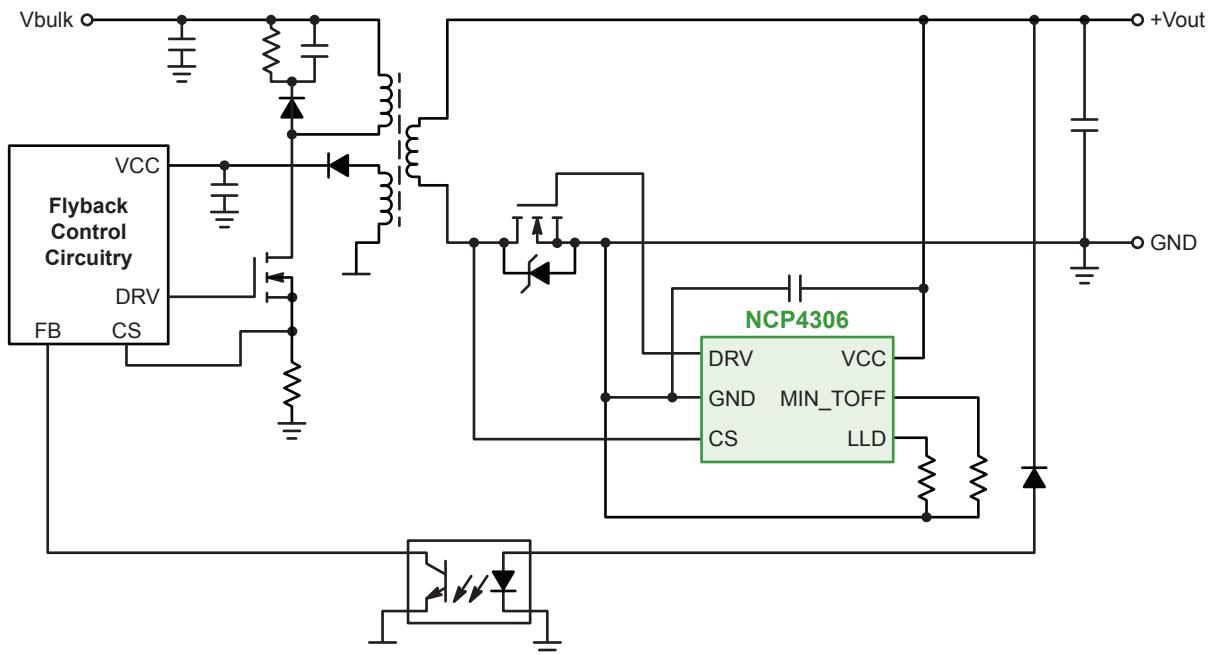

Multi-Mode Boost PFC Performance in a Wide Main 240 W Design

Device	Control Mode	Conduction Mode	Frequency	Package
NCP1654	Current	Continuous	Fixed	SOIC-8
FAN9672/3	Current	Continuous (Interleaved)	Fixed	LQFP-32
NCP1631	Current	Critical, Discontinuous (Interleaved)	Variable and/or Fixed	SOIC-16
NCP1632	Current	Critical, Discontinuous (Interleaved)	Variable and/or Fixed	SOIC-16
NCP1608	Voltage	Critical	Variable	SOIC-8
NCP1611	Voltage	Critical	Variable	SOIC-8
NCP1612	Voltage	Critical	Variable	SOIC-10
NCP1615	Voltage	Critical	Variable	SOIC-14, SOIC-16
NCP1616	Voltage	Critical	Variable	SOIC-9 NB
NCP1618	Voltage	Critical, Continuous	Variable and/or Fixed	SOIC-9
NCP1622	Voltage	Critical, Discontinuous	Variable	TSOP-6

## Secondary Side Controllers

### NCP4306 Features

- Self-Contained Control of Synchronous Rectifier in CCM, DCM and QR for Flyback or LLC Applications
- Precise True Secondary Zero Current Detection
- Typically 12 ns Turn-off Delay from Current Sense Input to Driver
- Rugged Current Sense Pin (up to 200 V)
- Adjustable or Fixed Minimum ON-Time
- Adjustable Minimum OFF-Time with Ringing Detection
- 7 A/2 A Peak Current Sink/Source Drive Capability
- Operating Voltage Range up to  $V_{cc} = 35$  V
- Automatic Light-Load & Disable Mode
- GaN Transistor Driving Capability
- Maximum Operation Frequency up to 1 MHz
- Download [EVBUM2522/D](#) for more information

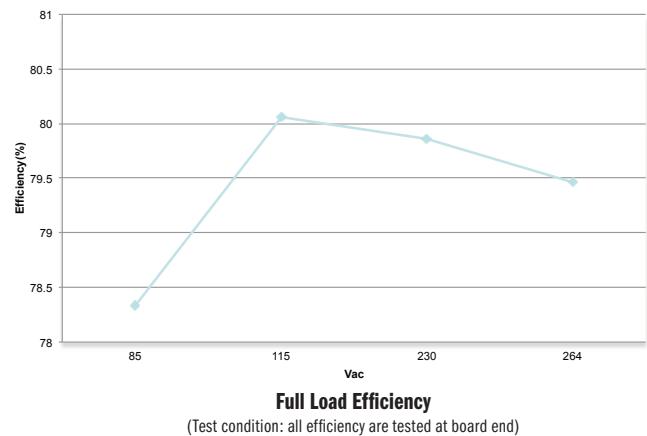

Device	Function	Package
NCP43080	Secondary Side Synchronous Rectification Driver	SOIC-8, DFN-8, WDFN-8
NCP4305/8	High Performance Secondary Side Synchronous Rectification Driver	SOIC-8, DFN-8, WDFN-8
NCP81178	High Performance Secondary Side Synchronous Rectification Driver	DFN-10
NCP4306	High Performance Secondary Side Synchronous Rectification Driver	TSOP-6, SOIC-8, DFN-8
FAN6248	High Performance LLC Synchronous Rectification Driver	SOIC-8
NCP4328	Secondary Side CC/CV Controller	TSOP-5, TSOP-6
NCP4353	Sleep Mode Controller for Low Standby Power	TSOP-6

## New Generation of High Voltage Switcher

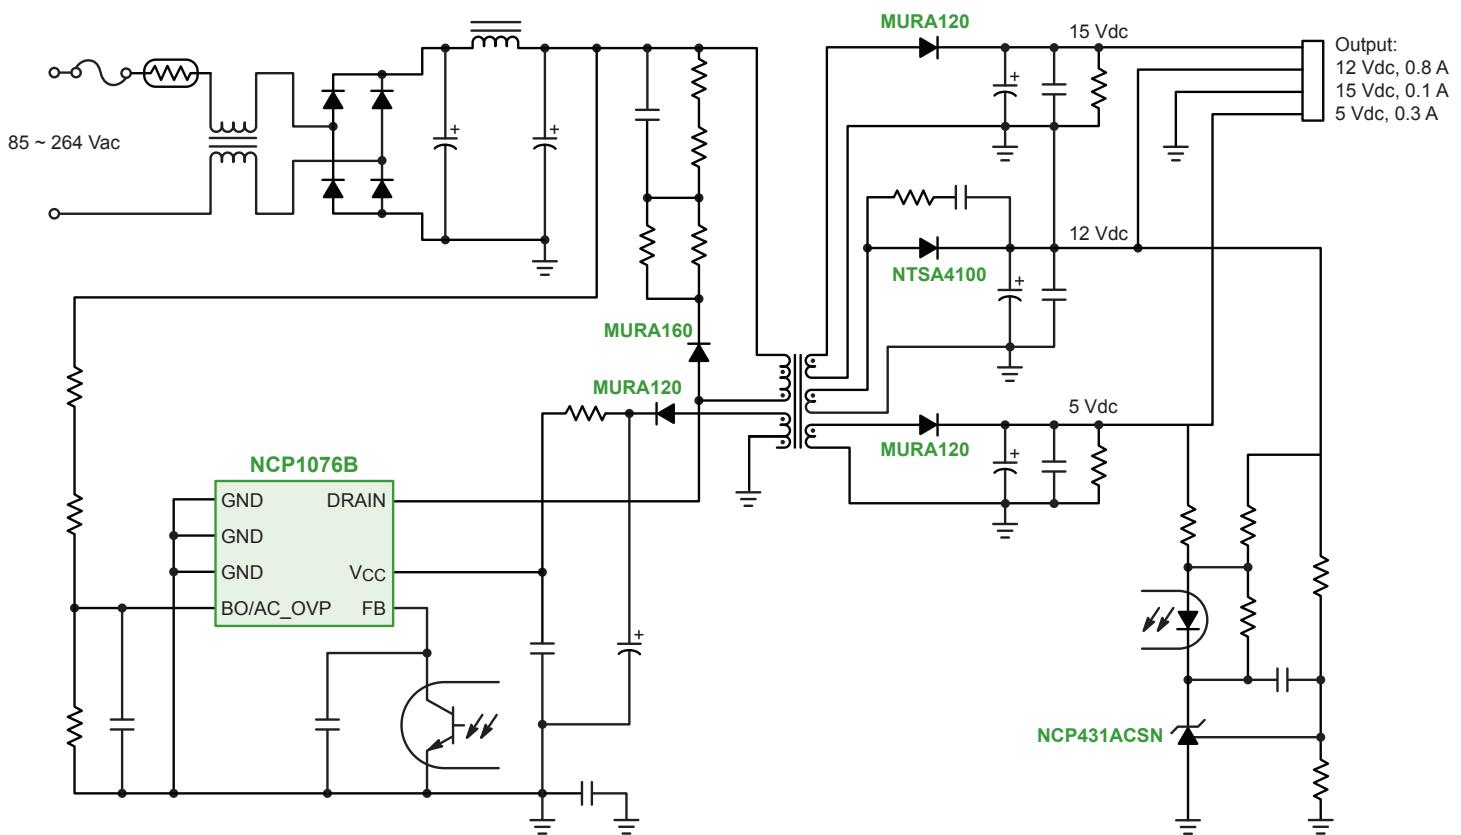

### NCP1075A/B~79A/B Features

- Built-in 700 V FET
- Dynamic Self Supply: no need for auxiliary winding
- VCC OVP management
- 2nd level OCP
- Adjustable Brown-Out & AC Line Over Voltage Protection
- Over Power Protection
- Frequency foldback and skip-mode with jittering
  - Improved light load efficiency
  - Improved EMI over the entire range
- No load power <50 mW

	NCP1070			NCP1071			NCP1072			NCP1075A/B			NCP1076A/B			NCP1077A/B

## AC-DC Controllers and Regulators

### Features

- Comprehensive, versatile portfolio supports:
  - Fixed frequency and variable frequency
  - Different topologies, from the classical flyback, to the half bridge resonant via the forward active clamp
  - Broad range of price-performance options, from cost effective devices to highly integrated controllers and regulators
- Embedded features ease compliance with stringent efficiency requirements: frequency foldback, Quiet-Skip mode
- Functions reduce EMI signatures and facilitate compliance with safety standards

### AC-DC Controllers and Regulators

Device	Topology	Type	Frequency	Control Mode	Package
NCP1060/63	Buck/Non-Isolated Flyback	700 V Switcher	Fixed	Current	SOIC-10, PDIP-7, SOIC-16

## Linear Voltage Regulators

### NCP59748 Features

- Output current in excess of 1.5 A
- VIN range: 0.8 V to 5.5 V
- VBIAS range: 2.7 V to 5.5 V
- Output voltage range: 0.8 V to 3.6 V
- Dropout voltage: 60 mV at 1.5 A
- Programmable Soft-Start
- Open drain Power Good output
- Fast transient response
- Stable with any type of output capacitor  $\geq 2.2 \text{ F}$
- Current limit and thermal shutdown protection

NCP59748 Application Diagram

## Voltage References

### NCP431 Features

- Programmable Precision Reference
- Pin to pin upgrade of the TL431 product
- Reduces no load power consumption in SMPS applications
- Reduced minimum cathode current (40  $\mu$ A)
- Programmable output voltage to 36 V
- Voltage reference tolerance: 0.5% @ 25°C (NCP431B)
- Integrated temperature compensation

$$\text{TL431 } I_{bias} = \frac{V_f}{R_{bias}} = \frac{1}{1K} = 1 \text{ mA}$$

$$\text{NCP431 } I_{bias} = \frac{V_f}{R_{bias}} = \frac{1}{10K} = 100 \mu\text{A}$$

\* for 19 V output adapter

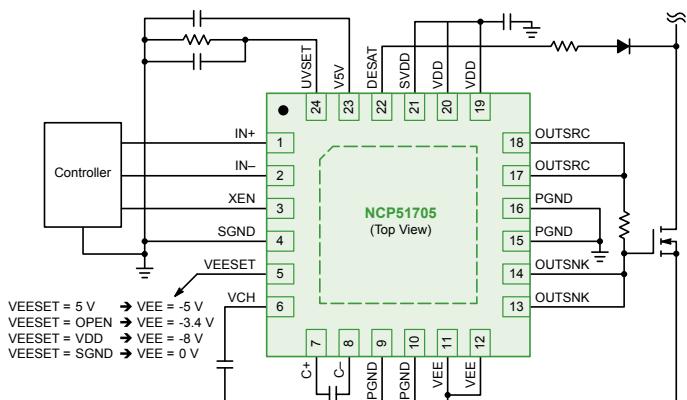

Device	V <sub>BR</sub> Typ (V)	Tolerance	Package
TL431	2.5	0.4%, 1%, 2.2%	SOIC-8, Micro8, TO-92
NCP431	2.5	0.5%, 1%	SOT-23-3, SOIC-8, TO-92
LM431	2.5	0.5%, 1%, 2%	SOIC-8, TO-92, SOT-23-3, SOT-89
LM285	1.25, 2.5	1%, 1.5%	SOIC-8, TO-92
LM385	1.25, 2.5	1%, 1.5%, 2%, 3%	SOIC-8, TO-92
TLV431	1.25	0.2%, 0.4%, 0.5%, 1%	SOT-23-3, TSOP-5, TO-92
NCP51460	3.3	1%	SOT-23-3

## Fully Integrated, 6 A SiC MOSFET Gate Driver

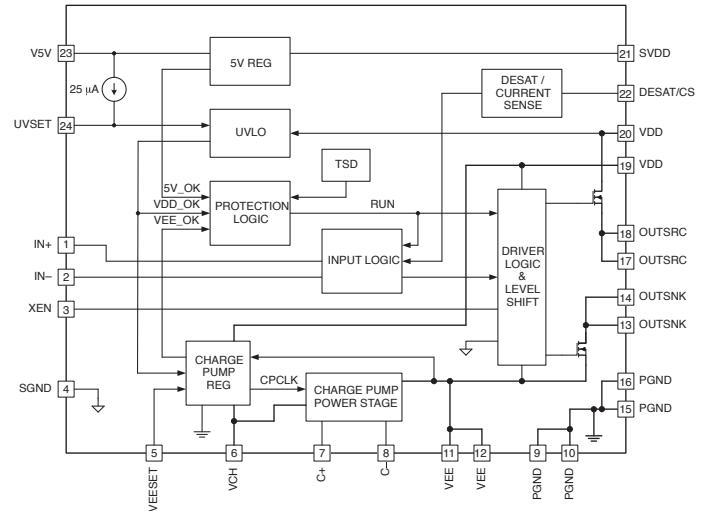

The NCP51705 driver is designed to primarily drive SiC MOSFET transistors. For the lowest possible conduction losses, the driver is capable to deliver the maximum allowable gate voltage to the SiC MOSFET device. For improved reliability, dV/dt immunity and even faster turnoff, the NCP51705 can utilize its on-board charge pump to generate a user selectable negative voltage rail.

### Features

- Adjustable, on-board regulated negative charge pump
- Negative voltage drive for fast turn-off
- 5 V reference/bias rail
- Adjustable UVLO levels

Typical Application Diagram

Device	Output Current		Delay Time		Shutdown	Typical Dead Time (ns)	Package
	Source (mA)	Sink (mA)	T <sub>on</sub> (ns)	T <sub>off</sub> (ns)			
NCP51705	6000	6000	25	25	Yes	Variable	QFN-24

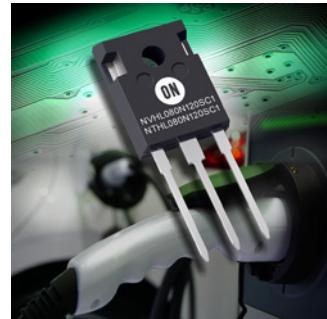

## Silicon Carbide (SiC) MOSFETs and Diodes

### System Benefits

- High efficiency
- Faster operating frequency
- Increased power density
- Reduced EMI

### Device Features

- No reverse recovery current
- Temperature independent switching characteristics
- Excellent thermal performance

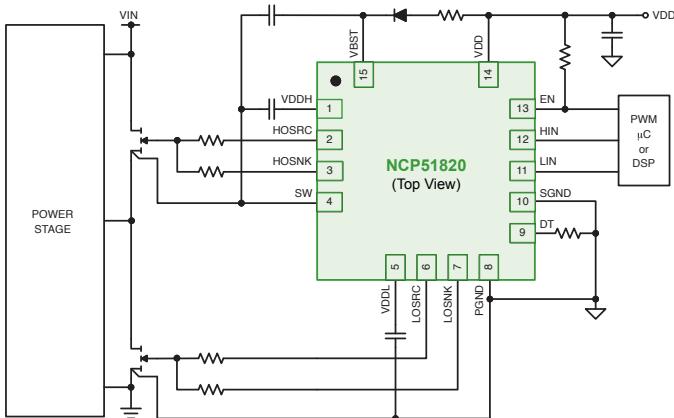

Type	Device	Voltage (V)	Current (A)	Package(s)
SiC Diode	FFSxyy65z	650	4, 6, 8, 10, 12, 16, 20, 30, 40, 50	TO-220, TO-247, DPAK, D2PAK, PQFN-4

## High Voltage GaN Gate Driver

The NCP51820 high speed gate driver is designed to meet the stringent requirements of driving enhancement mode (E-mode) and gate injected transistor (GIT) GaN power switches in offline half bridge power topologies. To fully protect the gate of the GaN power transistor against excessive voltage stress, both high and low side drive stages employ a dedicated voltage regulator to accurately maintain the gate source drive signal amplitude.

- 650 V high and low side gate driver
- Regulated 5.2 V gate driver with independent UVLO for high and low side output stages
- Fast propagation delay of 50 ns max
- 200 V/ns dv/dt rating of SW and PGND referenced circuit

Typical Application Diagram

NCP51820 Internal Block Diagram

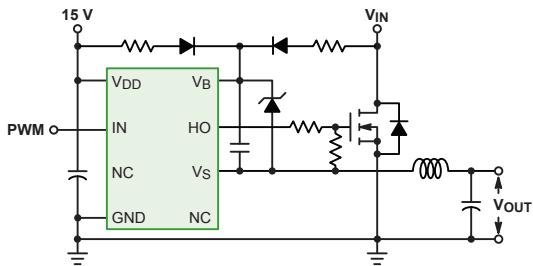

Device	Type	Offset Voltage (V)	Output Current		Delay Time		Shutdown	Typical Dead Time (ns)	Package
			Source (mA)	Sink (mA)	Ton (ns)	Toff (ns)			
NCP51820	High & Low-Side	600	1000	2000	25	25	Yes	Variable	QFN-15

## High Voltage Gate Drivers (HVICs)

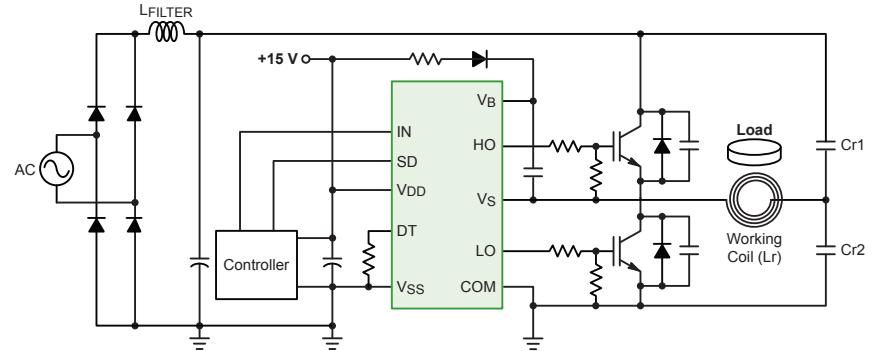

High voltage gate drivers (HVICs) from ON Semiconductor improve system reliability by utilizing an innovative common-mode dv/dt noise canceling circuit that provides excellent noise immunity. With a voltage capability up to 700 V and a very fast switching speed ( $dV/dt = 50\text{ V/ns}$  max), the devices are optimal for driving MOSFETs and IGBTs in a wide array of applications.

### Features

- Better noise immunity (due to noise canceling circuit over high dv/dt common-mode noise)
- Low power consumption (IQBS/IQCC are lower than competitor's device)
- $dV/dt$  transient immunity voltage level (50 V/ns)
- Extended allowable negative  $V_S$  swing to -9.8 V for signal propagation @  $V_{CC} = V_{BS} = 15\text{ V}$
- Matched propagation delay below 50 ns
- UVLO functions
- TTL compatible input threshold levels

## Wide Selection of High Voltage Power MOSFETs

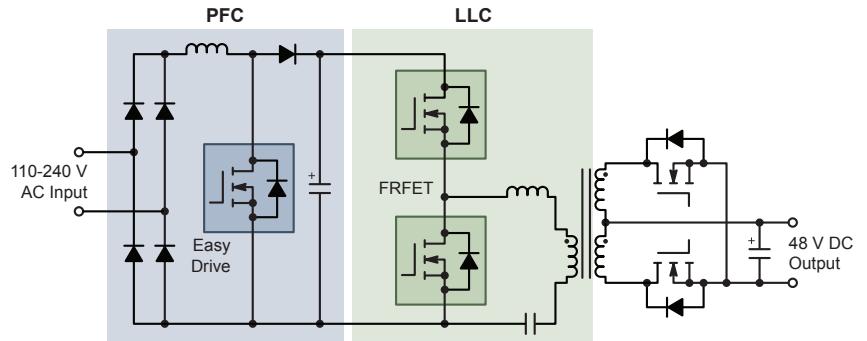

ON Semiconductor offers an expansive portfolio of Power MOSFETs, utilizing advanced SuperJunction technology. Devices enable increased system level efficiency through low switching and low conduction losses, and are available in a range of standard and innovative packages.

### Features

- SUPERFET® III Easy Drive
  - Outstanding ease of use and low EMI
  - Excellent Figure-of-Merit (RDS(ON) Max X Qg Typ)
  - Lower peak V<sub>DS</sub> and gate oscillation
  - V(BR)DSS of 650 V at T<sub>j</sub> = 25°C, 700 V at T<sub>j</sub> = 150°C
  - Robust body diode
- SUPERFET III FFRFET®
  - No need additional circuit in LLC resonant converter
  - Improving system reliability
  - Best in class body diode performance (lowest TRR and QRR)
  - Lower peak V<sub>DS</sub> and gate oscillation
  - V(BR)DSS of 650 V at T<sub>j</sub> = 25°C, 700 V at T<sub>j</sub> = 150°C

## Wide Selection of Medium Voltage Power MOSFETs

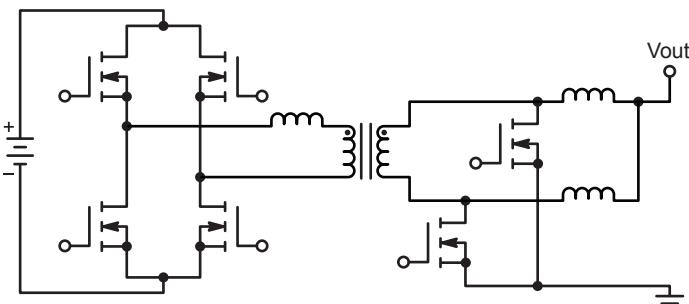

ON Semiconductor offers an expansive portfolio of Power MOSFETs, utilizing advanced shielded gate technology. Devices enable increased system level efficiency through low conduction and low switching losses, and are available in a range of standard and innovative packages.

### Features

- T6 and T8, 40 to 80 V technology
- 80 V to 150 V PTNG
  - Optimised low  $R_{DS(ON)}$  and  $Q_g$
  - Ultra soft body diode with PTNG
  - Lowest  $R_{DS(ON)}$  in SO-8FL with T6
  - Provides low ringing
  - Improved EMI performance
  - Lower conduction losses
  - Lower switching losses
  - Best in class body diode
  - Soft recovery and small QRR
  - Ultra low gate resistance for fast switching

Overshoot Reduction Enabled by Shielded Gate  
MOSFET Technology

## N-Channel MOSFETs for Power Conversion

*Non-Isolated Topology "Buck" DC-DC*

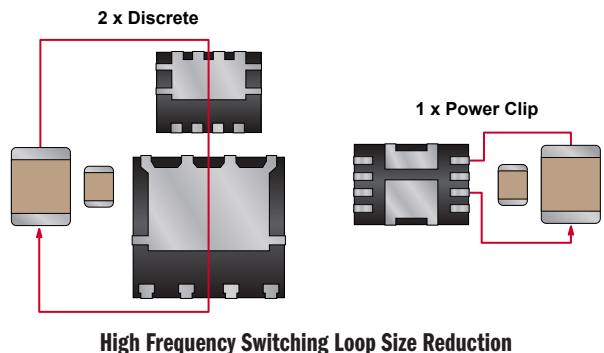

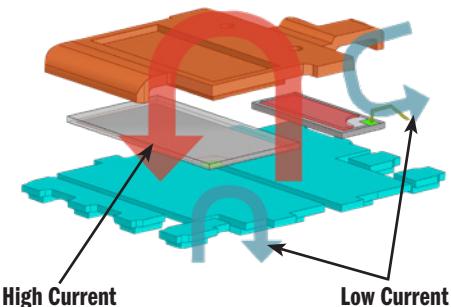

### Features

- Low R<sub>DS(ON)</sub> for low conduction loss
- Low capacitance for low switching loss
- Integrated Schottky for enhanced light load efficiency

### Increasing Power Density with PowerClip Dual MOSFETs

- Single optimized clip reduces interconnect parasitics
  - Up to 40 A in 5x6 mm & 25 A in 3x3 mm
- Flipped low side die reduces source inductance & improves thermals

## ORing MOSFETs

### Features

- Ultra low R<sub>DSON</sub> for low conduction loss
- 25 V and 30 V for IM bus ORing
- 100 V for 48 V bus ORing
- Much more efficient and reliable solution than power diodes

## Rectifiers for Surge Bypass and Clamp

Device	Type	V <sub>RMM</sub> (V)	I <sub>0</sub> (A)	V <sub>F Typ</sub> (V)	I <sub>FSM</sub> (A)	Package
MRUS360B	Ultrafast	600	3	1.25	100	SMB
MURS3x0	Ultrafast	200, 400, 600	3	<1.25	100	SMC
ES3x	Ultrafast	50, 100, 150, 200, 600	3	<1.7	100	SMC
S3x	Standard	50, 100, 200, 400, 600, 800, 1000, 1200	3	<1.2	100	SMC
FES10x	Ultrafast	200, 400, 600	10	<1.8	150	TO-277
FS8x	Standard	400, 600, 800, 1000	8	<1.1	230	TO-277
RUR1S1560S9A	Ultrafast	600	15	1.5	200	D2PAK
ISL9R18120S3S	Ultrafast	1200	18	2.7	200	D2PAK

## Rectifiers for Snubber Circuits

Device	Type	V <sub>RRM</sub> (V)	I <sub>O</sub> (A)	V <sub>F Typ</sub> (V)	T <sub>RR Typ</sub>	Package
S1xFL	Standard	50 - 100	1	1.1	~1.3 µs	SOD-123
S1xFP	Standard	60 - 100	1.2	1.3	~1.5 µs	SOD-123
GF1x	Standard	50 - 1000	1	<1.2	~2.0 µs	SMA
MRA400x	Standard	300 - 1000	1	1.1	~1.5 µs	SMA
S1x	Standard	50 - 1000	1	1.1	~1.8 µs	SMA
S2x	Standard	50 - 1000	2	1.15	~2.0 µs	SMB
S3xB	Standard	50 - 1000	3	1.15	~1.5 µs	SMB
MRS1504	Standard	400	1.5	1.04	~1.5 µs	SMB
S3x	Standard	50 - 1200	3	1.15	~2.5 µs	SMC
FS8x	Standard	400 - 1000	8	<1.1	~3.0 µs	TO-277
NHP160SF	Ultrafast	600	1	3	50 ns	SOD-123
MURS160	Ultrafast	50 - 600	1	<1.25	50 ns	SMB
NHP260SF	Ultrafast	600	2	3.3	50 ns	SOD-123
MURS260	Ultrafast	600	2	1.45	50 ns	SMB
MURS360/B	Ultrafast	600	3	1.25	75 ns	SMB, SMC
MURS480E	Ultrafast	800	4	1.85	100 ns	SMC
FES6x	Ultrafast	200 - 600	6	<2.2	45 ns	TO-277

SUPERFET and RFET are registered trademarks of Semiconductor Components Industries, LLC (SCILLC) or its subsidiaries in the United States and/or other countries. 80 PLUS is a registered trademark of ECOS Consulting. ENERGY STAR and the ENERGY STAR logo are registered U.S. marks. All other brand names and product names appearing in this document are trademarks of their respective holders.

ON Semiconductor and the ON Semiconductor logo are trademarks of Semiconductor Components Industries, LLC dba ON Semiconductor or its subsidiaries in the United States and/or other countries. ON Semiconductor owns the rights to a number of patents, trademarks, copyrights, trade secrets, and other intellectual property. A listing of ON Semiconductor's product/patent coverage may be accessed at [www.onsemi.com/site/pdf/Patent-Marking.pdf](http://www.onsemi.com/site/pdf/Patent-Marking.pdf). ON Semiconductor reserves the right to make changes without further notice to any products herein. ON Semiconductor makes no warranty, representation or guarantee regarding the suitability of its products for any particular purpose, nor does ON Semiconductor assume any liability arising out of the application or use of any product or circuit, and specifically disclaims any and all liability, including without limitation special, consequential or incidental damages. Buyer is responsible for its products and applications using ON Semiconductor products, including compliance with all laws, regulations and safety requirements or standards, regardless of any support or applications information provided by ON Semiconductor. "Typical" parameters which may be provided in ON Semiconductor data sheets and/or specifications can and do vary in different applications and actual performance may vary over time. All operating parameters, including "Typicals" must be validated for each customer application by customer's technical experts. ON Semiconductor does not convey any license under its patent rights nor the rights of others. ON Semiconductor products are not designed, intended, or authorized for use as a critical component in life support systems or any FDA Class 3 medical devices or medical devices with a same or similar classification in a foreign jurisdiction or any devices intended for implantation in the human body. Should Buyer purchase or use ON Semiconductor products for any such unintended or unauthorized application, Buyer shall indemnify and hold ON Semiconductor and its officers, employees, subsidiaries, affiliates, and distributors harmless against all claims, costs, damages, and expenses, and reasonable attorney fees arising out of, directly or indirectly, any claim of personal injury or death associated with such unintended or unauthorized use, even if such claim alleges that ON Semiconductor was negligent regarding the design or manufacture of the part. ON Semiconductor is an Equal Opportunity/Affirmative Action Employer. This literature is subject to all applicable copyright laws and is not for resale in any manner.
